Harsh Sawant

Backend Engineer | Node.js, NestJS, PostgreSQL, AWS | I root-cause production issues across API, database amp; infra | MCA 2026

Mumbai, Maharashtra, India

Summary

I find the root cause when systems misbehave, then fix it properly. In 3+ years I've owned production web platforms used by 10,000+ users across India, GCC and Indonesia. One example: a 3–4 year old defect where late-night shows (after 00:00) never appeared on cinema box-office and auditorium displays. With only restricted read access to the clients database, I traced it to the show-date query logic, documented the evidence in a report for the client, and got it fixed in 2 weeks. What I do day to day:• Build backends with Node.js / NestJS, GraphQL and REST, on PostgreSQL, MySQL and Redis• Deploy and run them on AWS (EC2, S3) with Docker, Nginx, PM2 and GitHub Actions• Monitor production, triage recurring issues, and validate every new client launch before it goes live• Reverse-engineer API flows to automate manual work (Python / Node scripts)I also build full-stack products end to end, including a B2B food-delivery platform (customer, admin and rider portals, payments, RBAC with super-admin approval) and a multi-tenant citizen-grievance platform. Currently completing my MCA (Manipal University Jaipur, 2026) and looking for a backend engineering role at a product company where I can own systems end to end. Open to: Backend / Software Engineer roles — Mumbai or remote. Reach me: harshhsawaant@gmail.com

Experience

Enpointe IO

Junior Software Programmer
September 2023 - Present (3 years 2 months)
Mumbai, Maharashtra, India

• Root-caused a 3–4 year recurring defect where shows after 00:00 did not appear on box-office and auditorium displays; traced it to the show-date query logic via restricted read-only client DB access, documented the evidence, and drove the fix to closure in 2 weeks.

• Built and maintained production apps (Next.js, Node.js, GraphQL, PostgreSQL) serving 10,000+ users, including Box Office and Auditorium Management modules across India, GCC and Indonesia.
• Designed Role-Based Access Control (RBAC) to secure workflows and simplify user management.
• Added Redis caching in front of PostgreSQL to improve backend responsiveness.
• Automated manual operational workflows by reverse-engineering REST/ GraphQL request flows; wrote Python scripts and internal tools to cut repetitive effort and errors.
• Own day-to-day production monitoring for cinema clients and run local go-live validation for each new cinema before it hits production.
• Manage deployments on AWS EC2/S3 with Docker, Nginx, PM2 and GitHub Actions using a pre-release checklist.

Education

Manipal University Jaipur

Master of Computer Applications - MCA, Computer Science · (September 2024 - October 2026)

Thakur College of Science & Commerce

Bachelor of Science - BS, Computer Science · (September 2020 - March 2023)
